OSTEOPOROSIS SEMINAR: The Silent Stalker

Osteoporosis affects more than 28 million Americans, 80% of them women. Normal aging leads to some loss of bone mass, but osteoporosis can severely weaken bones, contributing to fractures of the vertebra or hip. Your best defense against osteoporosis is to learn the facts about this crippling disease, and find out if you are at risk. In addition, a free test with the accuDEXA Machine can be offered to determine your bone mass density, which is an accurate indicator of your current status.

BONE MINERAL DENSITY SCREENING: Are you at risk?

Advanced Health Professionals has the accuDEXA Machine to assess bone mineral density. Assessing a person's bone mineral (BMD) density with this machine is as routine as taking your blood pressure. The hand is placed into the accuDEXA and in a few minutes, Advanced Health Professionals reads your BMD assessment. This simple but critical test could affect your good health for years to come.
